

Storage Methods and Apparatus for Streaming Media Data

ABSTRACT OF THE DISCLOSURE

A cache memory configured to store media data to be output as a media
5 stream includes a session data file configured to store properties of the media stream, wherein
the properties may include encoding scheme, duration, and others, and a plurality of data
object files, each data object file individually and directly accessible by a file system, each
data object file comprising a data object configured to store only a portion of the media data.
